

## Project Data Flow Diagram

### Project Data Flow Information:

1. The passenger flight information is stored in the Manifest Table
2. Video input is used to identify the passenger face
3. The digital ID card is used to get the passenger's identity
4. The face extracted from the Digital ID card is compared against the face from the video during the identity validation process step
5. The passenger's boarding pass is compared against the flight details
6. The person identify validation is done by comparing the information from the Digital ID against the flight details.
7. Baggage test images are used during the passenger's luggage check step
8. The passenger's boarding pass is validated using the flight details
9. The passenger's identify validation is done using their digital id and the recorded video
10. The passenger's carryon luggage is checked for lighters
